

CESAB B3 & B4

The Cesab B3&B4 range has 3 and 4-wheel models of different sizes for a variety of indoor and outdoor applications such as loading, unloading, stacking and horizontal transport. All electric counterbalanced trucks offer high performance, all-round visibility, easy manoeuvrability and are equipped with our patented Intelligent Stability Design, ISD. They provide great flexibility by offering a range of energy solutions designed for optimal energy efficiency.

Electric counterbalanced trucks

B3 - B4

Energy efficiency meets excellent performance

The Cesab 3-wheel B3, a reliable and versatile 48-volt electric counterbalanced truck, offers high levels of productivity, ideal in confined spaces thanks to its short turning radius. The 4-wheel B4 performs exceptionally well, both indoors and outdoors, and is highly stable and manoeuvrable. Both models have been improved in terms of ergonomics with a new floating driver compartment giving the operator excellent comfort with less vibration and noise. A choice of different energy solutions (lead-acid, lithium-ion and fuel cell*) are offered for high energy efficiency and maximum productivity. StaminaTune from Cesab, with IPM (Interior Permanent Magnet) motor and our advanced controllers, delivers enhanced performance, while minimising energy consumption.

PRODUCTIVITY

DESIGN

ERGONOMICS

Excellent driving experience

Seamless driving experience indoors and outdoors with the full floating compartment, designed for optimal comfort and productivity (advanced cabin as an option).

Energy efficiency

Efficient operations ensured thanks to wide choice of energy solutions: lead-acid, lithium-ion batteries or even fuel cell solutions.

Easy access for service

Maintenance is hassle-free with easy access to key components, ensuring reduced service cost and minimal downtime.

Intuitive touchscreen display

The optional colour touchscreen display is both intuitive and interactive showing essential parameters and controls.

* Fuel cell only via specials
